Display species using names.

Information

This page lists species groups which have species records that **fall within or overlap Arthur's Seat Volcano** recorded at **10km** and based on the datasets you have access to.

Click on a species group to view the species recorded.

The Snout *Hypena proboscidalis*: Distribution map

72.003^{BF2477}

The Snout *Hypena proboscidalis*

(Linnaeus, 1758)

Wingspan 25-38 mm.

A common species throughout Britain, this moth can often be found in numbers around dusk, flying over patches of the foodplant, nettle (*Urtica dioica*).

It is on the wing from June to August, and again later in the autumn, and is a common occurrence at the light-trap.

It occurs on waste ground, gardens, woodland and other places where nettle occurs.
