

NBN Gateway Access Controls

A guide to the access controls available for species datasets on the NBN Gateway including examples.

Managing Access to Species Records

NBN Gateway

- When preparing a dataset for the NBN Gateway you are asked to indicate the level of access you would like the public to have to the information it contains.
- The NBN Gateway has a framework of access controls to help you manage access to wildlife data responsibly.
- It is important to build a good understanding of the controls before you prepare and submit a dataset if you need to restrict public access to any of the information it contains.

Managing Access to Species Records

Access Position

- A founding principle of the NBN is that wildlife data should be easily accessible to enable their use for decision-making, education, research and other public-benefit purposes.
- The NBN Gateway represents a good opportunity to be proactive in the dissemination of wildlife data you hold.
- However, there are circumstances in which open access to the full detail of data is not in the best public interest and access needs to be managed responsibly.

Managing Access to Species Records

Access Position

- In deciding whether or not to restrict access to data it is desirable to begin from an open position and then identify any parts of the data that really need to be restricted.
- If you decide to restrict public access it is important that the reasons for this are set out within the Access Constraints field of the Metadata Form for Species Datasets.
- This helps users understand the need for restrictions and helps the wider NBN partnership better understand and address the issues constraining greater access to data.

NBN Gateway Access Controls

Setting Public Access

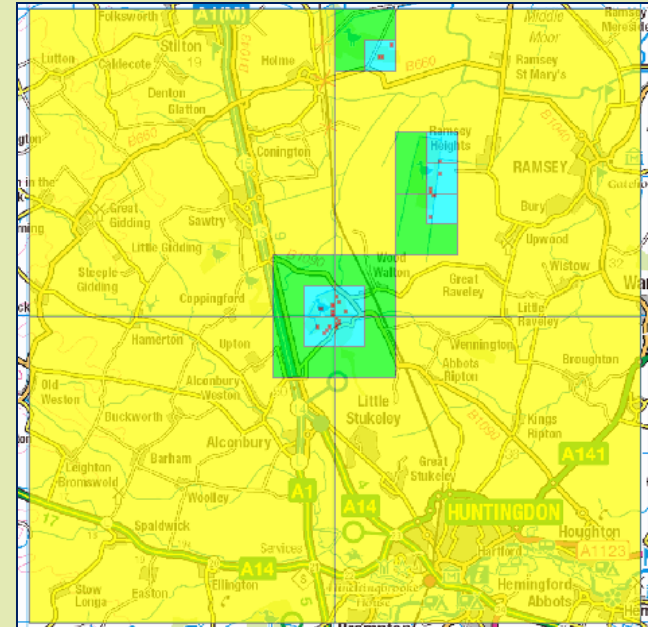

- There are access controls for setting resolution access, access to recorder names and access to record attributes
- These apply to all records within a dataset
- There is no public access to sensitive records
- Initially only one access control is available...

NBN Gateway Access Controls

Setting Public Access

Access Resolution

You can control the geographic resolution at which records within your dataset are displayed and downloaded to different users.

Resolution can be set at Full, 1km, 2km or 10km squares

NBN Gateway Access Controls

Setting Public Access

- If you grant **full geographic resolution** access,
2 additional controls become available for use...

NBN Gateway Access Controls

Setting Enhanced Access

- You may also grant enhanced access to specific users and organisations registered on the NBN Gateway
- There is only one access control for setting enhanced access – **full access including recorder names and attributes**
- These may apply to some or all of the records within a dataset.
- Additionally you may **grant access to sensitive** records

Access Control Examples

So how do these controls actually effect what is seen?

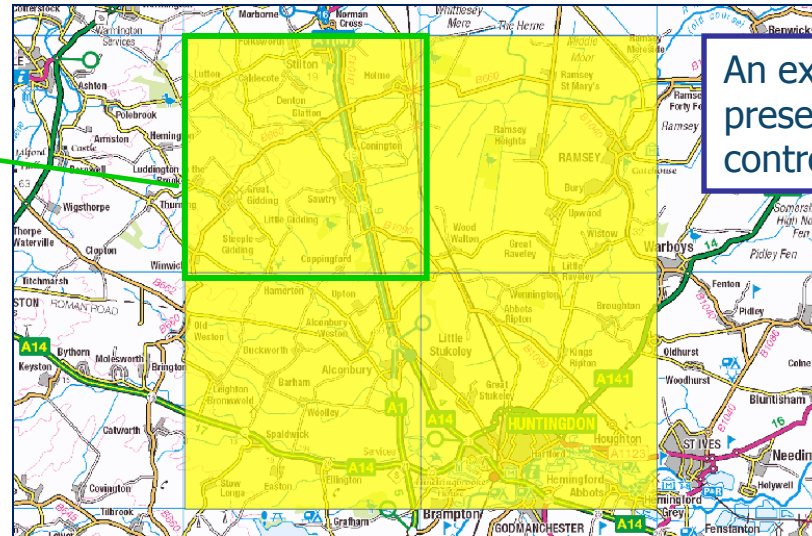

The following slides give examples of implemented access controls on the NBN Gateway...

PUBLIC
ACCESS

Access Control Examples

Control Setting 1.1:

Resolution = 10km

An example of the records presented in maps with this control setting.

PUBLIC
ACCESS

Access Control Examples

Control Setting 1.3:
Resolution = 1km

Interactive map interface showing records for *Cyanistes caeruleus*. The interface includes a navigation bar with 'nbn gateway', 'HOME', 'LOG IN/OUT', 'LIBRARY', 'MY ACCOUNT', 'HELP', and 'FEEDBACK'. A user notification states 'YOU ARE LOGGED IN AS Oliver Grafton.' The main content area displays 'Selected records for Cyanistes caeruleus' and 'Records from the dataset Demonstration dataset for the NBN Gateway'. A summary of access is provided: 'Summary of your access to the dataset Demonstration dataset for the NBN Gateway, provided by National Biodiversity Network Trust'. A table shows the access resolution (100m) and the resolution of the records (1km). A red box highlights the 'Site name' column, which contains 'Site name protected' for all records. A text box explains: 'So far the 'Site name' has been protected because the access resolution granted is less than that recorded for the records.' The table also includes columns for 'View Attributes', 'View Recorder', 'Site Accuracy', and 'Sensitive'.

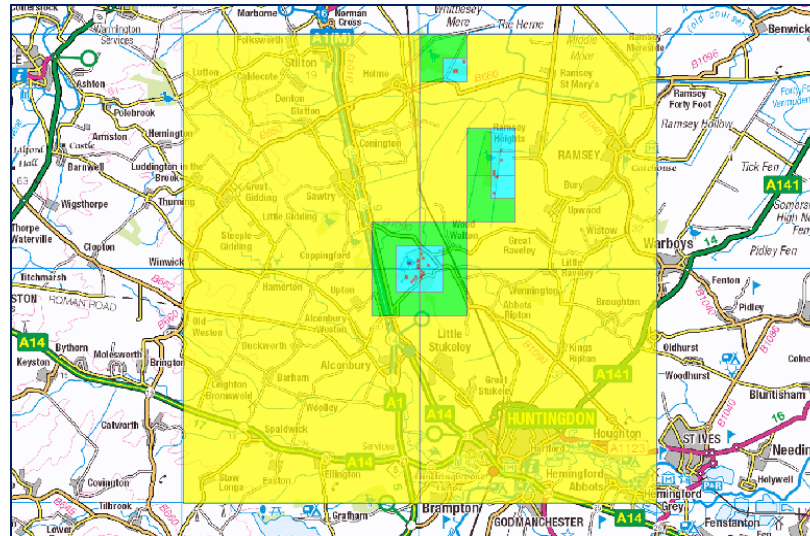

Dataset Resolution	Your Resolution
100m	1km

Map	Site name	TL2080	28/2/2008	Day	Sensitive
map	Site name protected				N
map	Site name protected				N
map	Site name protected				N
map	Site name protected	TL2080	28/2/2008	Day	N
map	Site name protected	TL2079	22/2/2008	Day	N
map	Site name protected	TL2080	11/4/2008	Day	N

PUBLIC
ACCESS

Access Control Examples

Control Setting 2:
Resolution = Full

nbn gateway HOME LOG IN/OUT LIBRARY MY ACCOUNT HELP FEEDBACK
